DETAILED ACTION

1. The applicant's amendment filed on September 23, 2010 was received. Claims 5-7 and 10 were cancelled. Claims 8, 11 and 12 were amended.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 102

3. In view of Applicant's cancelation of claims 7, the Examiner withdraws the previously set forth rejection of claim 7 under 35 U.S.C. 102(e) as being anticipated by Eshragi et al. as detailed in the Office Action dated June 23, 2010.

Allowable Subject Matter

4. Claims 1-4, 8, 9, 11 and 12 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art neither teaches nor suggests a fuel cell system comprising at least two fuel cell stacks; a humidifier configured to humidify at least one of the reaction gases to be supplied to the fuel cell stacks; and a reaction gas supply pipe configured to feed the reaction gas from a reaction gas exhaust port of the humidifier to reaction gas supply ports of the fuel cell stacks, wherein the humidifier is disposed between the two fuel cell stacks such that the humidifier is provided in the space separating the two fuel cell stacks; and wherein the reaction gas supply pipe is bifurcated at a bifurcation point into two portions directed toward the two fuel cell stacks respectively, the lengths of the

portions from the bifurcation point to the reaction gas supply ports of the two fuel cell stacks being substantially the same.

The closest prior art is Sugita and Eshragi.

Sugita teaches a fuel cell system **10**, comprising a first fuel cell stack **12** and a second fuel cell stack **14** which are arranged in parallel to one another. A piping system **28** is used to supply and discharge a fuel gas and an oxygen-containing gas to the first and second fuel stacks **12** and **14** (configured to receive reaction gases). The piping system **28** includes fuel gas supply tubes **192a** and **192b** (two portions, the lengths being substantially the same) which merge to make communication with a fuel gas supply port **194** (reaction gas supply pipe) (see col. 3, lines 11-14, col. 7, lines 56-57; figure 1). Sugita is silent to a humidifier and is silent to a space separating the first and second fuel cell stacks.

Eshragi teaches a fibrous fuel cell sub-bundle **20** (fuel cell system) that comprises multiple microfibrinous fuel cells **24** (at least two fuel cell stacks) wound around a hollow tubular humidifying element **22** (humidifier disposed between the two fuel cell stacks such that the humidifier is provided in the space between the two fuel cell stacks) comprising an electrically non-conductive/thermally conductive material. The humidifying element may comprise a non-porous, hydrophilic or microporous, hydrophobic membrane wall that allows water or water vapor to permeate therethrough to humidify the surrounding microfibrinous fuel cells (supplied reaction gases and exhausted reaction gases circulating through the humidifier are directed to flow toward a direction in which the fuel cells are stacked) (see paragraph 52, 57 and 58; figure 2).

Eshragi is silent to a reaction supply pipe configured to feed the reaction gas from a reaction gas exhaust port of the humidifier to reaction gas supply ports of two of the fuel cell stacks.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
